FulfillX in action

Orchestrate smarter AutoStore workflows

Smarter coordination across robots, inventory, orders, operators, and workflows.

Kardex FulfillX brings purpose-built software orchestration to AutoStore systems, helping coordinate robots, inventory, orders, operators, ports, and workflows. By prioritizing work, managing exceptions, and adapting to changing fulfillment needs, FulfillX helps improve daily execution, support scalable performance, and give teams better control over how the system operates.

Key Features

- Coordinates robots, inventory, orders, operators, ports, and workflows
- Supports workflow optimization and order prioritization
- Helps manage priority and expedite workflows
- Supports inventory and order coordination across the system
- Integrates with existing host systems and surrounding workflows
- Supports scalable performance as fulfillment needs change

Core Benefits

- Improves control over daily AutoStore execution
- Helps optimize robot and operator efficiency
- Supports faster, smarter order flow through the system
- Improves visibility and coordination across workflows
- Helps reduce manual intervention and exception handling
- Supports scalable performance as the operation grows

Kardex + AutoStore: Purpose-built to perform

Innovations that make AutoStore faster, smarter, and easier to operate

Kardex enhances AutoStore with a portfolio of proprietary innovations designed to improve performance across the full system lifecycle — from implementation and orchestration to picking, maintenance, cleaning, and inventory validation. Together, these solutions help reduce manual effort, improve accuracy, protect uptime, and unlock more value from every AutoStore system.

Kardex BinInductAI

Automatically verifies each bin before it enters the AutoStore grid to simplify bin induction and support faster deployment.

Kardex Intuitive Picking Assistant (IPA)

Visually guides operators at the workstation and validates actions in real time to help increase picking speed, accuracy, and consistency.

Kardex SensorCleaningStation

Automatically cleans robot sensors to help maintain consistent performance, reduce manual maintenance, and protect system uptime.

Kardex SnapVac

Cleans grid during live operation to reduce manual maintenance effort and protect reliability.

Kardex PortScale

Uses real-time, weight-based validation to detect picking or quantity errors, support precise item counting, and reduce manual checking at the workstation.

Curious about how AutoStore can work for your business?

Calculate your ideal AutoStore system and ROI with StoreX; our quick assessment tool.

- Find out your system size, cost, and expected ROI.
- **Scan the QR-Code** to access the AutoStore cost calculator.
- **Bonus:** Compare different configurations to see what fits your needs best.
